Goodmark Cowl Induction Hood

One of the quickest ways to change the appearance of your truck is to switch out your stock hood for a cowl hood. Goodmark Industries has a full line of aftermarket steel hoods that feature a 2-inch rise on the cowl scoop, have fully detailed inner frames and a welded screen in the scoop opening. Since all of the original hardware is used, the install is quick and painless.

1
First remove all of the accessories attached to the hood: the squirters, line and vacuum reservoir (if applicable).

2
Next remove the bolt and nut on each side that holds the hood in place.

3
Once the bolts are removed the old hood can be lifted out and set aside.

4
The Goodmark steel hood is a direct replacement and will bolt right into place.

5
Switch over the latch and spring from the stock hood to the Goodmark hood.

6
The rubber will be reused as well. This will ensure that we get a tight seal when the hood is shut.

7
Our final step is to reattach the accessories and swap over the hood squirters.

8
We're going to leave the hood as is for now since we'll be putting the entire truck into primer after some sheet metal work is completed.
